REMOVING HEAT INTERLOCK – E1 E2 E3 H5 if necessary?

IDENTIFY

On the 'CYCLE RELAY' (inner relay of two) there is a WHITE cable with a 'Black' terminal sleeve, and floating BROWN cable with a Black sleeve

Change the cables over so the BROWN cable is on the Relay and the white cable floating.

Put the clear rubber cover from the BROWN over the end of the WHITE cable for safety.

H7 ONLY

IDENTIFY 2 / 4 minute Switch ,

WHITE cable with Black terminal sleeve on the bottom connection (A)

BROWN cable with Black terminal sleeve hanging loose (B)

Change over the BROWN cable for the WHITE cable

_____ The next 2 pages are for training and identifying the interlock circuit.

Drawing 1 Select Position

Where you select a cycle by pressing the cycle switch.
The switch will illuminate but will not start until the machine is up to temperature
EXCEPT H750 with '4 MIN' selected
All machines with Heat interlock removed.

Drawing 2 Start Position

The machine is up to temperature and the cycle will start (Orange cable to timer)
We have detailed the '2/4 MIN' switch, which indicates either a signal from the thermostats (White Cable) or constant power (Brown Cable)

Drawing 3 Changeover Position

When the machine starts to rinse a signal from the timer (RED Cable) changes the circuit so that when the cycle is completed the machine will stop and you have to select a cycle again to start the machine

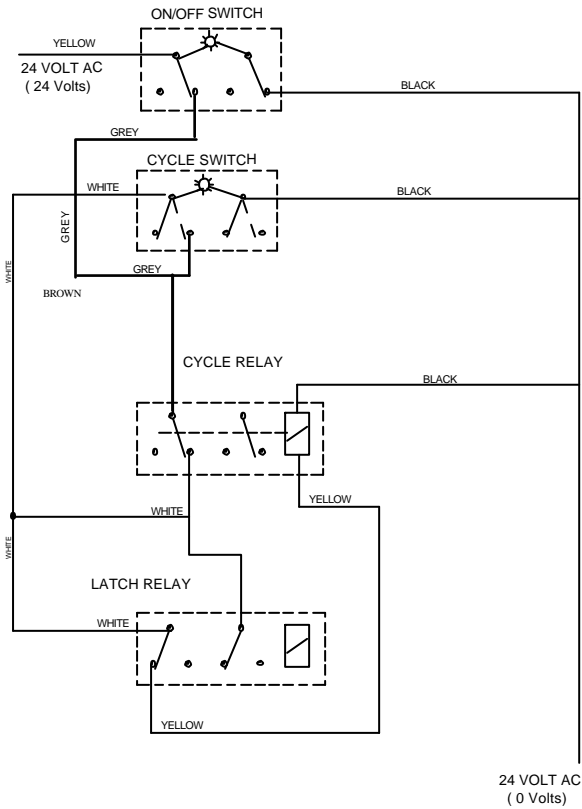

Next Page Fault Finding – Help on possible faults, which may occur

HOLE FIXINGS

The RBP5 kit of parts are bolted to the bracket when it is despatched, you only have to fit the assembly to the machine connect up the hoses and electrical connections.

PCB SOAP PUMP ADJUSTMENT

When the machine is switched on the soap pump will operate on the initial setting. Each wash cycle the pump operate a 'TOP UP' dose.

If the machine is turned off for any reason, when it is switched back on it will give an INITIAL dose
