

Ordering the correct spares:

Main oven elements for the King Edward Potato Baker

There have been several modifications to the main oven elements since the King Edward Potato baker range was introduced.

How do I know which oven I have and which elements I need?

- A. Serial nos. 5500 onwards. If you only have one element & a fan at the back of the oven this is a FAN ASSISTED oven. For a small baker you need part number 700001 (PB1). For a large oven (PB2F or PB2FV) you could need either a rectangular or circular element – see Page 2 for details.
- B. If you have two rectangular shaped elements either side of the oven this is NON-FAN, but there are three types. Follow the options:

Ordering the correct spares:

Main oven elements for fan assisted King Edward Potato Bakers (PB2 models only)

There have been two versions of the large fan assisted oven (codes PB2F and PB2FV) made since 1998. The very first fan ovens were made using a rectangular shaped element - serial numbers c **5650 - 5700**. Subsequently this was replaced by a circular element, which is still used to this day, serial nos **5700** onwards.

Both elements have bracketed terminals and fix through the back wall of the main oven.

Rectangular element

Part number 7000020

← 2600W; 240V

NO LONGER AVAILABLE

Circular element

Part number 7000022

2600W; 240V

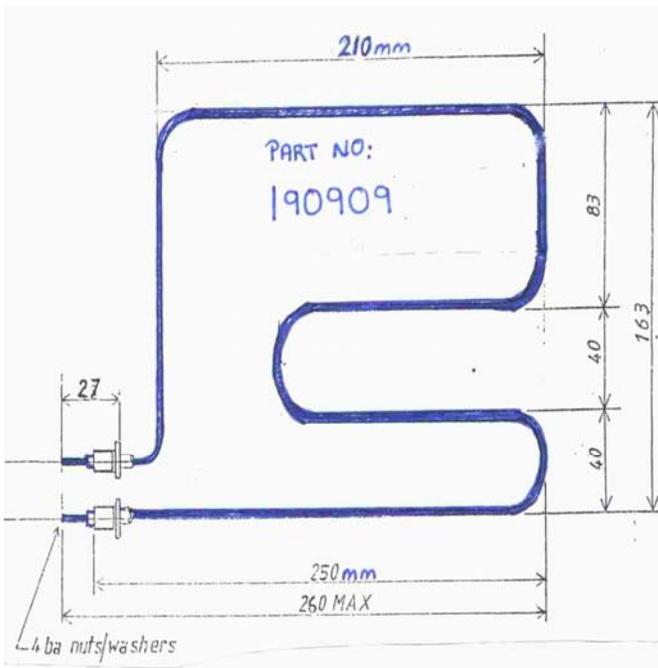

Ordering the correct spares:

Main oven elements for non-fan assisted King Edward Potato Bakers (PB range)

Oven serial numbers **4000 - 5500**. Elements situated right and left of oven. Where the element terminals go through the back wall of the main oven. Each terminal of the element passes through the back wall of the main oven and bolts on individually.

← Small oven (PB1)

Part number **190909**

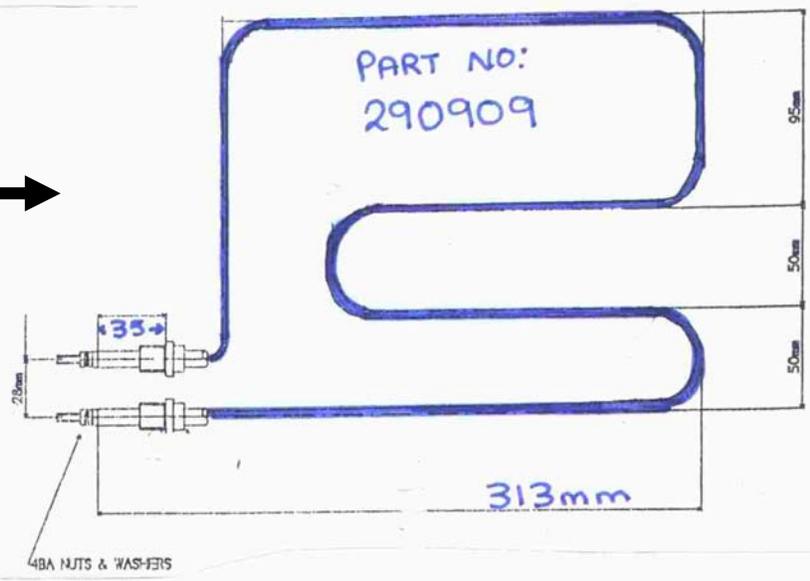

Total wattage on serial plate – 1575W

NO LONGER AVAILABLE

Large oven (PB2)

Part number **290909**

Total wattage on serial plate – 2075W

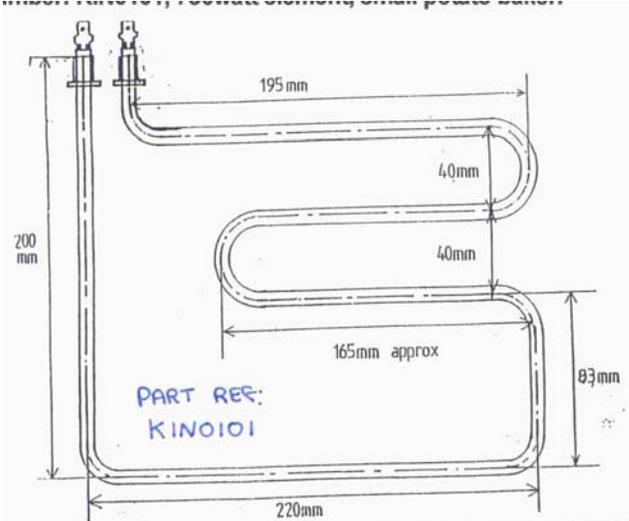

Ordering the correct spares:

Main oven elements for non-fan assisted small Potato Bakers (PB1 models)

Oven serial numbers **up to 4000**. Elements situated right and left of oven. Where the element terminals go through base of the main oven. The terminals either bolt on individually or are joined by a bracket at the base. Check existing terminals to be sure.

← Small oven (PB1)

Part number **KIN0101**

Individually bolted

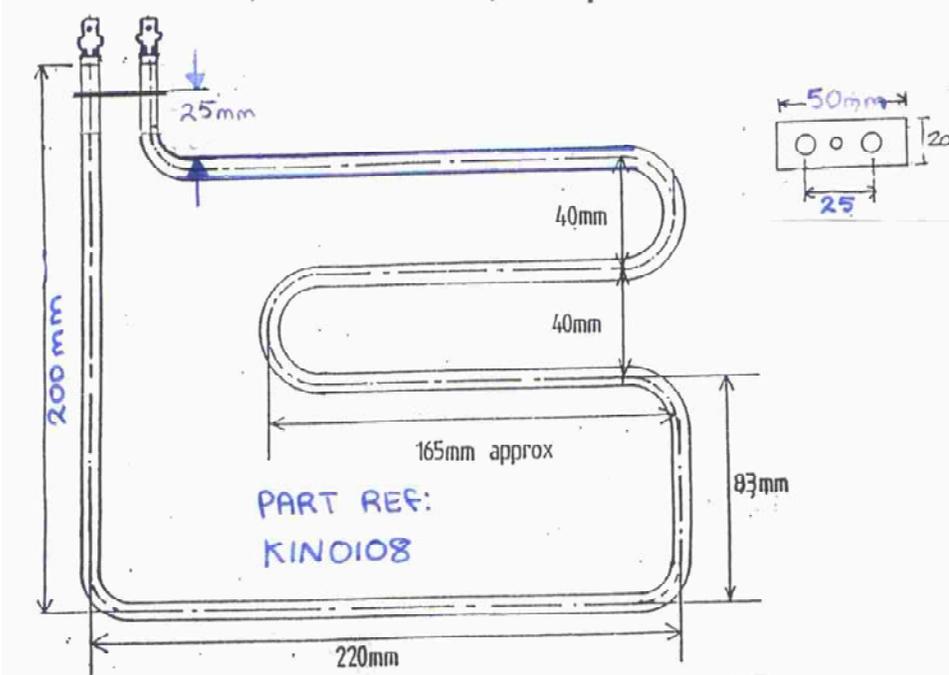

Total wattage on serial plate – 1575W

NO LONGER AVAILABLE

Small oven (PB1)

Part number **KIN0108**

Connected in base
Total wattage on serial plate – 1575W

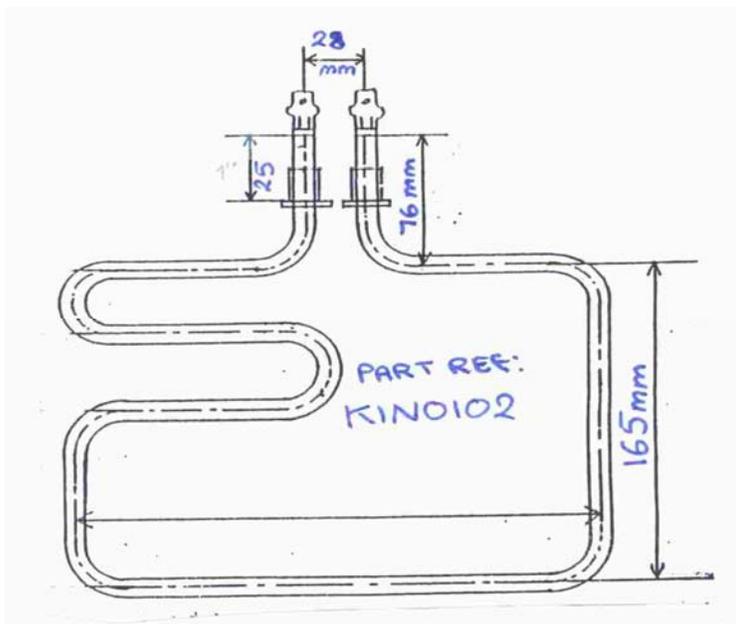

Ordering the correct spares:

Main oven elements for non-fan assisted large Potato Bakers (PB2 models)

Oven serial numbers **up to 4000**. Elements situated right and left of oven. Where the element terminals go through base of the main oven. The terminals either bolt on individually or are joined by a bracket at the base. Check existing terminals to be sure.

← Large oven (PB2)

Part number **KIN0102**

Individually bolted

Total wattage on serial plate – 2075W

Large oven (PB2)

Part number **KIN0109**

Connected in base

Total wattage on serial plate – 2075W
