# Section 1

# To the Installer

The following are general installation instructions. For complete installation details, please see the check out card.

## Installer Safety

In all areas of the world, equipment should be installed in accordance with existing local codes. Please contact your local authorities if you have any questions.

Care should be taken to ensure that all basic safety practices are followed during the installation and servicing activities related to the installation and service of Taylor equipment.

- Only authorized Taylor service personnel should perform installation and repairs on the equipment.
- Authorized service personnel should consult OSHA Standard 29CFR1910.147 or the applicable code of the local area for the industry standards on lockout/tagout procedures before beginning any installation or repairs.
- Authorized service personnel must ensure that the proper PPE is available and worn when required during installation and service.
- Authorized service personnel must remove all metal jewelry, rings, and watches before working on electrical equipment.

The main power supply(s) to the freezer must be disconnected prior to performing any repairs. Failure to follow this instruction may result in personal injury or death from electrical shock or hazardous moving parts as well as poor performance or damage to the equipment.

**Note: All repairs must be performed by an authorized Taylor Service Technician.**

This unit has many sharp edges that can cause severe injuries.

## Site Preparation

Review the area the unit is to be installed in before uncrating the unit, making sure that all possible hazards the user or equipment may come into have been addressed.

**For Indoor Use Only:** This unit is designed to operate indoors, under normal ambient temperatures of 70°-75°F (21°-24°C). The freezer has successfully performed in high ambient temperatures of 104° (40°C) at reduced capacities.

This unit must **NOT** be installed in an area where a water jet or hose can be used. **NEVER** use a water jet or hose to rinse or clean the unit. Failure to follow this instruction may result in electrocution.

This unit must be installed on a level surface to avoid the hazard of tipping. Extreme care should be taken in moving this equipment for any reason. Two or more persons are required to safely move this unit. Failure to comply may result in personal injury or equipment damage.

Uncrate the unit and inspect it for damage. Report any damage to your Taylor Distributor.

This piece of equipment is made in the USA and has USA sizes of hardware. All metric conversions are approximate and vary in size.

## Air Cooled Units

The models 150 and 152 require a minimum of 6" (152 mm) of clearance around both sides. Install the skirt provided on the right side of the unit and place the back of the unit against a wall to prevent recirculation of warm air. The model 162 requires 6" (152 mm) on all sides and the skirt installed on the rear of the unit. The model 168 requires 3" (76 mm) on all sides and the skirt installed on the rear of the unit. Minimum air clearances must be met to assure adequate air flow for optimum performance.

**These machines are designed for indoor use only.**

**DO NOT** install the machines in an area where a water jet could be used. Failure to follow this instruction may result in serious electrical shock.

## Electrical Hook-Up Installation For 60 Cycle, 1 Phase, Supplied With Cord and Plug

This equipment is supplied with a 3-wire cord and grounding type plug for connection to a single phase, 60 cycle, branch circuit supply. This unit must be plugged into a properly grounded receptacle. The cord and plug provided for 115/60/1, is 20 amp; therefore the wall outlet must also be 20 amp. Check the data label, located on the side panel, for electrical specifications.

Permanent wiring may be employed if required by local codes. Instructions for conversion to permanent wiring are as follows:

1. Be sure the freezer is electrically disconnected.
2. Remove the appropriate panel and locate the small electrical box at the base of the freezer.
3. Remove the factory-installed cord and strain relief bushing.

4. Route incoming permanent wiring through 7/8" (22 mm) hole in base pan.
5. Connect two power supply leads. Attach ground (earth) wire to the grounding lug inside the electrical box.
6. Be sure the unit is properly grounded before applying power.

**FOLLOW YOUR LOCAL ELECTRICAL CODES!**

## Electrical Connections For Models Without Cord and Plug Supplied

Each freezer requires one power supply for each data label. Check the data label(s) on the freezer for fuse, circuit ampacity and electrical specifications. Refer to the wiring diagram provided inside of the control box, for proper power connections.

In the United States, this equipment is intended to be installed in accordance with the National Electrical Code (NEC), ANSI/NFPA 70-1987. The purpose of the NEC code is the practical safeguarding of persons and property from hazards arising from the use of electricity. This code contains provisions considered necessary for safety. Compliance therewith and proper maintenance will result in an installation essentially free from hazard! In all other areas of the world, equipment should be installed in accordance with the existing local codes. Please contact your local authorities.

**CAUTION: THIS EQUIPMENT MUST BE PROPERLY GROUNDED! FAILURE TO DO SO CAN RESULT IN SEVERE PERSONAL INJURY FROM ELECTRICAL SHOCK!**

This unit is provided with an equipotential grounding lug that is to be properly attached to the rear of the frame by the authorized installer. The installation location is marked by the equipotential bonding symbol (5021 of IEC 60417-1) on both the removable panel and the equipment's frame.

- Stationary appliances which are not equipped with a power cord and a plug or another device to disconnect the appliance from the power source must have an all-pole disconnecting device with a contact gap of at least 3mm installed in the external installation.
- Appliances that are permanently connected to fixed wiring and for which leakage currents may exceed 10 mA, particularly when disconnected, not used for long periods, or during initial installation, shall have protective devices such as a GFI to protect against the leakage of current, installed by authorized personnel to the local codes.
- Supply cords used with this unit shall be oil-resistant, sheathed flexible cable, not lighter than ordinary polychloroprene or other equivalent synthetic elastomer-sheathed cord (Code designation 60245 IEC 57) installed with the proper cord anchorage to relieve conductors from strain, including twisting, at the terminals and protect the insulation of the conductors from abrasion.

## Beater Rotation

Beater rotation must be clockwise as viewed looking into the freezing cylinder.

**Note: The following procedures should be performed by an authorized service technician.**

To correct rotation on a three-phase unit, interchange any two incoming power supply lines at freezer main terminal block only. To correct rotation on a single-phase unit, change the leads inside the beater motor. (Follow diagram printed on motor.)

Electrical connections are made directly to the terminal block provided in the splice box, mounted on the base pan on each side of the model 168, and located in the splice boxes mounted mid-level on the frame channel on the sides of the model 162.

## Refrigerant

In consideration of our environment, Taylor proudly uses only earth friendly HFC refrigerants. The HFC refrigerant used in this unit is R404A. This refrigerant is generally considered non-toxic and non-flammable, with an Ozone Depleting Potential (ODP) of zero (0).

However, any gas under pressure is potentially hazardous and must be handled with caution.

NEVER fill any refrigerant cylinder completely with liquid. Filling the cylinder to approximately 80% will allow for normal expansion.

Refrigerant liquid sprayed onto the skin may cause serious damage to tissue. Keep eyes and skin protected. If refrigerant burns should occur, flush immediately with cold water. If burns are severe, apply ice packs and contact a physician immediately.

Taylor reminds technicians to be cautious of government laws regarding refrigerant recovery, recycling, and reclaiming systems. If you have any questions regarding these laws, please contact the factory Service Department.

**WARNING:** R404A refrigerant used in conjunction with polyolester oils is extremely moisture absorbent. When opening a refrigeration system, the maximum time the system is open must not exceed 15 minutes. Cap all open tubing to prevent humid air or water from being absorbed by the oil.

## Section 2

## To the Operator

The freezer you have purchased has been carefully engineered and manufactured to give you dependable operation. The Taylor Company models covered in this manual consist of the following: 150, 152, 162 and 168.

These units, when properly operated and cared for, will produce a consistent quality product. Like all mechanical products, they will require cleaning and maintenance. A minimum amount of care and attention is necessary if the operating procedures outlined in this manual are followed closely.

This Operator's Manual should be read before operating or performing any maintenance on your equipment.

These units will NOT eventually compensate and correct for any errors during the set-up or filling operations. Thus, the initial assembly and priming procedures are of extreme importance. It is strongly recommended that personnel responsible for the equipment's operation, both assembly and disassembly, go through these procedures together in order to be properly trained and to make sure that no misunderstandings exist.

In the event you should require technical assistance, please contact your local authorized Taylor Distributor.

**Note:** Warranty is valid only if the parts are authorized Taylor parts, purchased from an authorized Taylor Distributor, and the required service work is provided by an authorized Taylor service technician. Taylor reserves the right to deny warranty claims on equipment or parts if non-approved parts or refrigerant were installed in the machine, system modifications were performed beyond factory recommendations, or it is determined that the failure was caused by neglect or abuse.

**Note: Constant research results in steady improvements; therefore, information in this manual is subject to change without notice.**

If the crossed out wheeled bin symbol is affixed to this product, it signifies that this product is compliant with the EU Directive as well as other similar legislation in effect after August 13, 2005. Therefore, it must be collected separately after its use is

completed, and cannot be disposed as unsorted municipal waste.

The user is responsible for returning the product to the appropriate collection facility, as specified by your local code.

For additional information regarding applicable local laws, please contact the municipal facility and/or local distributor.

### Compressor Warranty Disclaimer

The refrigeration compressor(s) on this machine are warranted for the term indicated on the warranty card accompanying this machine. However, due to the Montreal Protocol and the U.S. Clean Air Act Amendments of 1990, many new refrigerants are being tested and developed, thus seeking their way into the service industry. Some of these new refrigerants are being advertised as drop-in replacements for numerous applications. It should be noted that, in the event of ordinary service to this machine's refrigeration system, **only the refrigerant specified on the affixed data label should be used.** The unauthorized use of alternate refrigerants will void your compressor warranty. It will be the owner's responsibility to make this fact known to any technician he employs.

It should also be noted that Taylor does not warrant the refrigerant used in its equipment. For example, if the refrigerant is lost during the course of ordinary service to this machine, Taylor has no obligation to either supply or provide its replacement either at billable or unbillable terms. Taylor does have the obligation to recommend a suitable replacement if the original refrigerant is banned, obsoleted, or no longer available during the five year warranty of the compressor.

The Taylor Company will continue to monitor the industry and test new alternates as they are being developed. Should a new alternate prove, through our testing, that it would be accepted as a drop-in replacement, then the above disclaimer would become null and void. To find out the current status of an alternate refrigerant as it relates to your compressor warranty, call the local Taylor Distributor or the Taylor Factory. Be prepared to provide the Model/Serial Number of the unit in question.

We at Taylor Company are concerned about the safety of the operator when he or she comes in contact with the freezer and its parts. Taylor has gone to extreme efforts to design and manufacture built-in safety features to protect both you and the service technician. As an example, warning labels have been attached to the freezer to further point out safety precautions to the operator.

**IMPORTANT!** Failure to adhere to the following safety precautions may result in severe personal injury. Failure to comply with these warnings may damage the machine and its components. Component damage will result in part replacement expense and service repair expense.

## To Operate Safely:

**DO NOT** operate the freezer without reading the Operator Manual. Failure to follow this instruction may result in equipment damage, poor freezer performance, health hazards, or personal injury.

This equipment is provided with a grounding lug that is to be properly attached to the rear of the frame by the authorized installer. The installation location is marked by the equipotential bonding symbol (5021 of IEC 60417-1) on the removable panel and the frame.

- **DO NOT** operate the freezer unless it is properly grounded.
- **DO NOT** operate the freezer with larger fuses than specified on the freezer data label.
- **DO NOT** attempt any repairs unless the main power supply to the freezer has been disconnected.

- Appliances that are permanently connected to fixed wiring and for which leakage currents may exceed 10 mA, particularly when disconnected or not used for long periods, or during initial installation, shall have protective devices such as a GFI, to protect against the leakage of current, installed by the authorized personnel to the local codes.
- Supply cords used with this unit shall be oil-resistant, sheathed flexible cable not lighter than ordinary polychloroprene or other equivalent synthetic elastomer-sheathed cord (Code designation 60245 IEC 57) installed with the proper cord anchorage to relieve conductors from strain, including twisting, at the terminals and protect the insulation of the conductors from abrasion.

Failure to follow these instructions may result in electrocution. Contact your local authorized Taylor Distributor for service.

**DO NOT** use a water jet to clean or rinse the freezer. Failure to follow these instructions may result in serious electrical shock.

- **DO NOT** allow untrained personnel to operate this machine.
- **DO NOT** put objects or fingers in door spout.
- **DO NOT** operate the freezer unless all service panels and access doors are restrained with screws.
- **DO NOT** remove the freezer door or beater assembly unless the control switches are in the "OFF" position.

Failure to follow these instructions may result in severe personal injury from hazardous moving parts.

- **DO NOT** put objects or fingers in fill or discharge openings. Failure to follow this instruction may result in contaminated product or personal injury from blade contact.
- **USE EXTREME CAUTION** when removing the beater assembly. The scraper blades are very sharp and may cause injury.

**DO NOT** obstruct air intake and discharge openings:

- **150 and 152:** Minimum of 6" (152 mm) of clearance around both sides. Install the skirt provided on the right side of the unit and place the back of the unit against a wall to prevent recirculation of warm air.
- **162:** Minimum of 6" (152 mm) on all sides. Install the skirt provided on the rear of the unit.
- **168:** Minimum of 3" (76 mm) on all sides. Install the skirt provided on the rear of the unit.

Failure to follow this instruction may cause poor freezer performance and damage to the machine.

This freezer must be placed on a level surface. Failure to comply may result in personal injury or equipment damage.

These freezers are designed to operate indoors, under normal ambient temperatures of 70°–75°F (21°–24°C). The freezers have successfully performed in high ambient temperatures of 104°F (40°C) at reduced capacities.

**NOISE LEVEL:** Airborne noise emission does not exceed 78 dB(A) when measured at a distance of 1.0 meter from the surface of the machine and at a height of 1.6 meters from the floor.

## Symbol Definitions

To better communicate in the International arena, the words on many of our operator switches and buttons have symbols to indicate their functions. Your Taylor equipment is designed with these International symbols.

The following chart identifies the symbol definitions used on the operator switches.

-  = ON/AUTO key
-  = ON key
-  = OFF key
-  = WASH key
-  = STANDBY key

## Reset Button

If an overload condition occurs, the freezer will automatically stop operating. To properly reset the freezer, place the toggle switch in the "OFF" position. Wait two or three minutes; then press the reset button. Place the power switch in the "WASH" position and observe the freezer's performance; place the power switch in the "AUTO" position.

**Note:** If the freezer is unplugged from the wall receptacle, it will be necessary to press the reset button for the freezer to operate once power is re-established.

## Power Switch

The center position is "OFF". The left position is "WASH" which activates the beater motor only. The right position is "AUTO", which activates the beater motor and the refrigeration system.

## Feed Tube

The models 150, 152, 162 and 168 are called upon to handle a large variety of products (i.e., soft serve, yogurts, Italian ices, sherbets, etc.). Thus, the consistency of the mix you use will vary. The feed tube meters a combination of mix and air into the freezing cylinder. If not enough mix enters the freezing cylinder, a freeze-up may occur, which will cause eventual damage to the beater. Depending upon the product being run, you may wish to contact your local authorized Taylor Distributor to make a slight adjustment in the feed tube.

Figure 10

**Note:** During "AUTO" operation, the orifice end of the tube should be inserted in the hole in the hopper.

## Taylor Quality Control

These units use a solid state control called the T.Q.C. The purpose of this solid state control is to sense the viscosity (thickness) of the product in the freezing cylinder. With the power switch in the "AUTO" position, the T.Q.C. will automatically keep the mix in the freezing cylinder at the proper viscosity and ready for serving.

## Indicator Light - "Mix Low"

A mix level indicating light is located at the front of the machine. When the light is on, it indicates that the mix hopper has a low supply of mix and should be refilled as soon as possible. Always maintain at least 2" (5.1 cm) of mix in the hopper. If you neglect to add mix, a freeze-up may occur. This will cause eventual damage to the beater assembly and to the freezer door.

## Mix Refrigeration Switch

The mix refrigeration switch is located under the control channel and is used for several purposes:

1. For the unit to operate in the "AUTO" mode, the mix refrigeration switch must be "ON".
2. For the separate hopper refrigeration system to operate, the mix refrigeration switch must be in the "ON" or the "STANDBY" position.
3. For the cylinder temperature retention system to operate, the power switch must be in the "AUTO" position and the mix refrigeration switch must be in the "STANDBY" position.

## Separate Hopper Refrigeration (SHR)

This feature incorporates the use of a separate small refrigeration system to chill (on a limited basis) and to maintain the mix in the hopper to under 40°F (4.4°C) and assures bacterial control. To activate this system, place the power switch in the "AUTO" position and the mix refrigeration switch in the "ON" position. To operate this system in the "STANDBY" mode, place the power switch in the "AUTO" position and the mix refrigeration switch in the "STANDBY" position.

## **Cylinder Temperature Retention (CTR)**

To maintain a good quality product during long “No Sale” periods, it will be necessary to warm the product in the freezing cylinder to approximately 35° to 40°F (1.7° to 4.4°C). This will prevent overbeating and product breakdown. The CTR is used in conjunction with the SHR to insure that the mix in the freezing cylinder is refrigerated during the “STANDBY” mode of operation.

### **To operate the “STANDBY” mode of operation:**

Place the power switch in the “AUTO” position and the mix refrigeration switch in the “STANDBY” position. With sanitized hands, remove the feed tube. Turn it over and place the end without the hole into the mix inlet hole.

### **To resume normal operation:**

Leave the power switch in the “AUTO” position and place the mix refrigeration switch in the “AUTO” position. When the unit cycles off, the product in the freezing cylinder will be the correct viscosity. With sanitized hands, remove the feed tube. Turn it over and place the end with the hole into the mix inlet hole.

## Section 6

## Operating Procedures

The Model 150 has been selected to illustrate the pictured step-by-step operating procedures. All models in this manual are similar. They each have a 1.5 quart (1.4 liter) capacity freezing cylinder. The mix flows by gravity from the hopper to the freezing cylinder through an feed tube.

The Model 150 is a console model with a single spout door.

The Model 152 is a counter model with a single spout door.

The Model 162 is a counter model and the Model 168 is a console model. Both have three spout doors. Two individual flavors are available from the end spouts, and an equal combination of both is dispensed through the center spout to create a twist effect.

For the Models 162 and 168, duplicate the procedures where they apply for the second freezing cylinder.

We begin our instructions at the point where we enter the store in the morning and find the parts disassembled and laid out to air dry from the previous night's cleaning.

These opening procedures will show you how to assemble these parts into the freezer, sanitize them, and prime the freezer with fresh mix in preparation to serve your first portion.

Figure 11

Figure 12

Figure 13

Figure 14

If you are disassembling the machine for the first time or need information to get to the starting point in our instructions, turn to page 26, "Disassembly", and start there.

## Assembly

**Note:** When lubricating parts, use an approved food grade lubricant (example: Taylor Lube).

### Step 1

Install the beater assembly. Slide the small, thick o-ring into the groove on the drive shaft of the beater assembly. Apply an even coat of Taylor Lube to the o-ring and the shaft. **Do not lubricate the hex end.**

Figure 15

Insert the beater assembly through the rear shell bearing at the back of the freezing cylinder and engage the hex end firmly into the female socket. When properly seated, the beater will not protrude beyond the front of the freezing cylinder.

Figure 16

**Repeat this step** for the second freezing cylinder on Models 162/168.

### Step 2

Assemble the freezer door. Place the large o-ring(s) into the groove(s) on the back of the freezer door and lubricate with Taylor Lube.

Figure 17

Slide the front bearing(s) over the baffle rod(s) so the flanged edge is against the door. Place the white plastic guide bearing(s) on the end of the baffle rod(s).

**Do not lubricate the front bearing(s) or the guide bearing(s).**

Figure 18

### Step 3

Slide the slotted portion of the handscrews into the slots in the freezer door.

#### Step 4

Install the freezer door. With both hands, hold the sides of the freezer door and insert the baffle rod(s) into the center of the beater assembly(ies). The white guide bearing(s) must fit securely in the hole(s) of the drive shaft(s). Finger-tighten the handscrews equally to insure that the door is snug. **Do not over-tighten.**

**Note:** The freezer door is in the correct position when the door spout is on the bottom.

#### Step 5

Install the draw valve(s). Slide the two o-rings into the grooves on the draw valve(s) and lubricate with Taylor Lube.

Figure 19

**Note:** For the Models 162/168, install the valve seal in the grooves on the center draw valve and lubricate with Taylor Lube. This special seal will prevent mix from one freezing cylinder from traveling into the second cylinder.

Figure 20

Lubricate the inside of the freezer door spout(s) from the **bottom**. Insert the draw valve(s) into the freezer door from the **bottom**.

Figure 21

**Note:** The draw valve is installed correctly when the slotted opening in the draw valve is visible through the “window” of the freezer door.

Figure 22

### Step 6

Install the draw valve handle. Insert the valve lifter arm through the slotted opening in the draw valve and align the other end with the cross holes of the freezer door.

**Hint:** The valve lifter arm may be aligned with the left or right cross hole. The draw valve handle will be placed through the opposite cross hole of the valve lifter arm.

Figure 23

Slide the o-ring into the groove on the draw valve handle and lubricate with Taylor Lube.

Figure 24

Insert the draw valve handle through the opposite cross hole and into the opening of the valve lifter arm.

**Hint:** The draw valve handle can be assembled at varied vertical positions. Choose an angle which is comfortable for you. The draw valve must be raised completely when the draw valve handle is down.

Figure 25

**Note:** For Models 162/168, slide the o-ring onto each pivot pin and lubricate with Taylor Lube.

Figure 26

**Note:** Models 162/168 have three draw handles. Slide the tip of the draw handle into the slot of the draw valve, starting from the right. Slide the short pivot pin through the far right draw handle. Slide the long pivot pin through the far left and middle draw handles.

Figure 27

#### Step 7

Snap the design cap(s) over the bottom of the freezer door spout(s).

Figure 28

#### Step 8

Lay the feed tube(s) in the bottom of the mix hopper(s).

## Sanitizing

#### Step 1

Prepare an approved 100 PPM sanitizing solution (examples: Kay-5® or Stera-Sheen®). USE WARM WATER AND FOLLOW THE MANUFACTURER'S SPECIFICATIONS.

#### Step 2

Pour one gallon (3.8 liters) of the sanitizing solution into the hopper and allow it to flow into the freezing cylinder.

#### Step 3

While the solution is flowing into the freezing cylinder, brush-clean the mix hopper, mix level float stem, mix level float, mix inlet hole, and feed tube.

Figure 29

Figure 30

Figure 31

#### Step 4

Press the reset button.

Figure 32

#### Step 5

Place the power switch in the "WASH" position. This will cause the sanitizing solution in the freezing cylinder to be agitated. Allow it to agitate for five minutes.

Figure 33

#### Step 6

Place an empty pail beneath the door spout and raise the draw valve. Draw off all of the sanitizing solution. When the sanitizer stops flowing from the door spout, lower the draw valve and place the power switch in the "OFF" position.

Figure 34

**Note:** On Models 162/168, momentarily pull down the center draw handle to sanitize the center door spout.

#### Step 7

With sanitized hands, stand the feed tube in the corner of the mix hopper. Place the mix level float on the mix level float stem.

Figure 35

**Repeat Steps 1 through 7** for the second freezing cylinder on Models 162/168.

## Priming

Prime the machine as close as possible to the time of first product draw.

### Step 1

With a pail beneath the door spout, raise the draw valve. Fill the mix hopper with **fresh** mix. (Maximum hopper capacity is 8 quarts [7.6 liters].) Allow the mix to flow into the freezing cylinder. This will force out any remaining sanitizing solution. When full strength mix is flowing from the door spout, lower the draw valve.

**Note:** Use only **FRESH** mix when priming the freezer.

Figure 36

### Step 2

When the mix has stopped bubbling down into the freezing cylinder, install the feed tube in the mix inlet hole. Make sure the small hole in the feed tube is down.

Figure 37

### Step 3

Momentarily raise the draw switch to activate the refrigeration cycle. Place the power switch in the "AUTO" position. When the unit cycles off, the product will be ready to serve.

Figure 38

### Step 4

Place the mix hopper cover in position.

**Repeat Steps 1 through 4** for the second freezing cylinder on Models 162/168.

### Step 5

Install the front drip tray and splash shield under the freezer door.

Figure 39

### Step 6

Slide the rear drip pan into the hole in the side panel.

Figure 40

## Closing Procedure

To disassemble the Models 150/152/162/168, the following items will be needed:

- Two cleaning pails
- Sanitized stainless steel rerun can with lid
- Necessary brushes (provided with freezer)
- Cleaner
- Single service towels

## Draining Product From the Freezing Cylinder

### Step 1

Place the power switch in the “OFF” position as far ahead of cleaning time as possible. This will allow frozen product to soften for easier cleaning.

### Step 2

Lift the hopper cover. Remove the feed tube and mix level float. Take them to the sink for cleaning.

### Step 3

If local health codes permit the use of rerun, place a sanitized, NSF approved stainless steel rerun container beneath the door spout. Place the power switch in the “WASH” position and raise the draw valve. When all the product stops flowing from the door spout, lower the draw valve and place the power switch in the “OFF” position. Place a sanitized lid on the rerun container and place it in the walk-in cooler.

(Note: For additional information regarding the proper use of rerun, see item 5 on page 27.)

**Note: If local health codes DO NOT permit the use of rerun, the product must be discarded.** Follow the instructions in the previous step, except drain the product into a mix pail and properly discard the mix.

**ALWAYS FOLLOW LOCAL HEALTH CODES.**

**Repeat Steps 1 through 3** for the second freezing cylinder on Models 162/168.

## Rinsing

### Step 1

Pour one gallon (3.8 liters) of **cool**, clean water into the mix hopper. With the brushes provided, scrub the mix hopper, the mix level float stem and the mix inlet hole.

### Step 2

With a pail beneath the door spout, place the power switch in the “WASH” position and raise the draw valve. Drain all the rinse water from the freezing cylinder. When the rinse water stops flowing from the door spout, lower the draw valve and place the power switch in the “OFF” position.

Repeat this procedure until the rinse water being drawn from the freezing cylinder is **clear**.

**Repeat Steps 1 and 2** for the second freezing cylinder on Models 162/168.

## Cleaning

### Step 1

Prepare an approved cleaning solution (examples: Kay-5® or Stera-Sheen®). **USE WARM WATER AND FOLLOW THE MANUFACTURER'S SPECIFICATIONS.**

### Step 2

Pour one gallon (3.8 liters) of the cleaning solution into the mix hopper and allow it to flow into the freezing cylinder.

### Step 3

While the solution is flowing into the freezing cylinder, brush-clean the mix hopper, mix level float stem and mix inlet hole.

### Step 4

Place the power switch in the “WASH” position. This will cause the cleaning solution in the freezing cylinder to agitate.

### Step 5

Place an empty pail beneath the door spout and raise the draw valve. Draw off all the cleaning solution. When the solution stops flowing from the door spout, lower the draw valve and place the power switch in the "OFF" position.

**Repeat Steps 1 through 5** for the other side of the freezer on Models 162/168.

## Disassembly

### Step 1

**Make sure the power switch is in the OFF position.** Failure to follow this instruction may result in severe personal injury from hazardous moving parts.

### Step 2

Remove the handscrews and the freezer door. Remove the beater assembly(ies) from the freezing cylinder(s) and take these parts to the sink for cleaning.

### Step 3

Remove the front drip tray and the splash shield from the freezer. Take them to the sink for cleaning.

## Brush Cleaning

### Step 1

Prepare a sink with an approved cleaning solution. **USE WARM WATER AND FOLLOW THE MANUFACTURER'S SPECIFICATIONS.**

**IMPORTANT:** Follow label directions, as too **STRONG** of a solution can cause parts damage, while too **MILD** of a solution will not provide adequate cleaning.) Make sure all brushes provided with the freezer are available for brush cleaning.

### Step 2

Remove the o-ring(s) from the drive shaft(s) of the beater assembly(ies).

**Note:** To remove the o-rings, use a single service towel to grasp the o-ring. Apply pressure in an upward direction until the o-ring pops out of its groove. With the other hand, push the top of the o-ring forward, and it will roll out of the groove and can be easily removed. If there is more than one o-ring to be removed, always

remove the rear o-ring first. This will allow the o-ring to slide over the forward rings without falling into the open grooves.

### Step 3

From the freezer door, remove the design cap, draw valve handle, valve lifter arm, and draw valve. Remove all o-rings.

**Models 162/168:** From the freezer door, remove design caps, pivot pins, draw handles, draw valves, and the center draw valve. Remove all o-rings.

### Step 4

Remove the large o-ring(s), front bearing(s), and guide bearing(s) from the back of the freezer door.

### Step 5

Return to the freezer with a small amount of cleaning solution. With the black bristle brush, brush clean the rear shell bearing(s) at the back of the freezing cylinder(s).

Figure 41

### Step 6

Remove the rear drip pan from the side panel and take it to the sink for cleaning.

**Note:** If the drip pan is filled with an excessive amount of mix, this is an indication that the drive shaft o-ring of the beater assembly should be replaced or properly lubricated.

### Step 7

Thoroughly brush clean all disassembled parts in the cleaning solution. Make sure all lubricant and mix film is removed. Take particular care to brush clean the draw valve core(s) in the freezer door. Place all the cleaned parts on a clean, dry surface to air dry overnight.

### Step 8

Wipe clean all exterior surfaces of the freezer.

# Section 7      Important: Operator Checklist

---

## During Cleaning and Sanitizing

**ALWAYS FOLLOW LOCAL HEALTH CODES.**

Cleaning and sanitizing schedules are governed by federal, state, or local regulatory agencies, and must be followed accordingly. If the unit has a “Standby mode”, it must not be used in lieu of proper cleaning and sanitizing procedures and frequencies set forth by the ruling health authority. The following check points should be stressed during the cleaning and sanitizing operations.

**CLEANING AND SANITIZING MUST BE PERFORMED DAILY.**

## Troubleshooting Bacterial Count

- ☐ 1. Thoroughly clean and sanitize the machine regularly, including complete disassembly and brush cleaning.
- ☐ 2. Use all brushes supplied for thorough cleaning. The brushes are specially designed to reach all mix passageways.
- ☐ 3. Use the smaller, white bristle brush to clean the mix inlet hole which extends from the mix hopper down to the rear of the freezing cylinder.
- ☐ 4. Use the black bristle brush to thoroughly clean the rear shell bearing located at the rear of the freezing cylinder. Be sure to have a generous amount of cleaning solution on the brush.

- ☐ 5. IF LOCAL HEALTH CODES PERMIT THE USE OF RERUN, make sure the mix rerun is stored in a sanitized, covered stainless steel container and is used the following day. DO NOT prime the machine with rerun. When using rerun, skim off the foam and discard. Mix the rerun with fresh mix in a ratio of 50/50 during the day's operation.
- ☐ 6. On a designated day of the week, run the mix as low as feasible and discard after closing. This will break the rerun cycle and reduce the possibility of high bacteria and coliform counts.
- ☐ 7. Properly prepare the cleaning and sanitizing solutions. Read and follow label directions carefully. Too strong of a solution may damage the parts and too weak of a solution will not do an adequate job of cleaning or sanitizing.
- ☐ 8. The temperature of the mix in the mix hopper and walk-in cooler should be below 40°F. (4.4°C.).

## Regular Maintenance Checks

- ☐ 1. Check the rear shell bearing for signs of wear (excessive mix leakage in rear drip pan) and be certain it is properly cleaned.
- ☐ 2. Using a screwdriver and cloth towel, keep the rear shell bearing and the female hex drive socket clean and free of lubricant and mix deposits.
- ☐ 3. Dispose of o-rings or seals if they are worn, torn, or fit too loosely, and replace with new ones.
- ☐ 4. Follow all lubricating procedures as outlined in “Assembly”.

- ☐ 5. If your machine is air cooled, check the condenser for an accumulation of dirt and lint. A dirty condenser will reduce the efficiency and capacity of the machine. Condensers should be cleaned **monthly** with a soft brush. **Never** use screwdrivers or other metal probes to clean between the fins. Failure to comply may result in electrocution.  
**Note:** For machines equipped with an air filter, it will be necessary to vacuum clean the filters on a monthly schedule.
- ☐ 6. On the auxiliary refrigeration system, check the condenser for accumulation of dirt and lint. A dirty condenser will reduce the refrigeration capacity of the mix hopper. Condensers must be cleaned **monthly** with a soft brush. **Never** use screwdrivers or other metal probes to clean between the fins. Failure to comply may result in electrocution.

## Winter Storage

If the place of business is to be closed during the winter months, it is important to protect the freezer by following certain precautions, particularly if the building is subject to freezing conditions.

Disconnect the freezer from the main power source to prevent possible electrical damage.

Your local Taylor distributor can perform this service for you.

Wrap detachable parts of the freezer such as the beater assembly and freezer door, and place them in a protected dry place. Rubber trim parts and gaskets can be protected by wrapping them with moisture-proof paper. All parts should be thoroughly cleaned of dried mix or lubrication accumulations which attract mice and other vermin.

## Section 8

## Troubleshooting Guide

PROBLEM	PROBABLE CAUSE	REMEDY	PAGE REF.
1. No product being dispensed.	a. The power switch is in the "OFF" position.	a. Place the power switch in the "AUTO" position.	24
	b. The mix level is inadequate in the mix hopper.	b. Fill the mix hopper with mix.	24
	c. The beater motor overloaded.	c. Reset the freezer.	16
	d. The unit is unplugged at the wall receptacle.	d. Plug in the power cord. Press the reset button.	16
	e. The circuit breaker is tripped or the fuse is blown.	e. Place the circuit breaker in the "ON" position, or replace the fuse. Press the reset button.	16
	f. The freezer door is incorrectly assembled.	f. See "Operating Procedures" for proper installation.	19
	g. Product is being drawn off in excess of the freezer's capacity.	g. Stop drawing product and allow the unit to recover.	- - -
2. The machine will not operate in the "AUTO" mode.	a. The unit is unplugged.	a. Plug in the power cord; press the reset button.	16
	b. The refrigeration system is not activated.	b. On T.Q.C. units, momentarily raise the draw switch to activate the refrigeration system.	24
	c. The circuit breaker is tripped, or the fuse is blown.	c. Place the circuit breaker in the "ON" position, or replace the fuse. Press the reset button.	16
	d. The beater motor overloaded, causing a loss of power to the power switch.	d. Reset the freezer.	16
3. The product is too stiff.	a. The temperature control or the T.Q.C. is set too cold.	a. Adjust the temperature control. Do not set the temperature colder than 18°F (-8°C). If T.Q.C., contact service technician.	16

PROBLEM	PROBABLE CAUSE	REMEDY	PAGE REF.
4. The product is too soft.	a. The temperature control or the T.Q.C. is set too warm.	a. Adjust the temperature control. If T.Q.C., contact service technician.	16
	b. The feed tube is not installed.	b. Install the feed tube in the mix inlet hole at the bottom of the mix hopper.	24
	c. Out-drawing the freezer's capacity.	c. Two 4 oz. (113.4 gram) servings in one minute.	- - -
5. The freezing cylinder walls are scored.	a. Operating freezer without the front bearing on the freezer door.	a. Install the front bearing on the freezer door.	19
	b. The gear unit or the direct drive is out of alignment.	b. Contact service technician.	- - -
6. Excessive leakage in rear drip pan.	a. A worn or defective o-ring is on the beater drive shaft.	a. Replace o-rings every 3 months.	32
	b. The rear shell bearing is worn.	b. Contact service technician.	- - -
	c. Incorrect lubricant was used.	c. Use food grade lubricant (example: Taylor Lube).	19
	d. Inadequate lubrication of beater drive shaft.	d. Lubricate the beater drive shaft properly.	19
7. The draw valve is leaking.	a. Incorrect lubricant was used.	a. Use food grade lubricant (example: Taylor Lube).	20
	b. Worn or defective o-rings are on the draw valve.	b. Replace o-rings every 3 months.	32
	c. Inadequate lubrication of draw valve.	c. Lubricate the draw valve properly.	20
8. Product is not feeding into the freezing cylinder.	a. The mix level is inadequate in the mix hopper.	a. Fill the mix hopper with mix.	24
	b. The mix inlet hole is frozen.	b. Contact service technician.	16

PROBLEM	PROBABLE CAUSE	REMEDY	PAGE REF.
9. The unit goes out on overload excessively.	a. There are too many appliances plugged into the circuit.	a. A <b>separate</b> 20 amp. circuit is needed for the freezer to operate properly.	- - -
	b. An extension cord has been placed between the power cord and the wall receptacle.	b. If the extension cord is used, it must match the power cord in size of circuit ampacity.	- - -
10. <b>Models 162 and 168:</b> Mix from one freezing cylinder bleeds over to the second cylinder.	a. The center draw valve seal is worn, or is improperly lubricated.	a. Lubricate properly and replace seal every 3 months.	20 / 32

GUARD-POWER & DANFOSS SWITCHES	035548			1	1	103		
PCB A.-MIX LOW CHIME	X41243SER1			1	1	103	115 & 230V APPLICATIONS	

+ Available Separately

NOTES:

- 1) FOR "CW" ROTATION OF LEESON BEATER MOTOR FOR MODE 1, IS10 CONNECT INTERNAL 18 TO TERMINAL 2 AND INTERNAL 15 TO TERMINAL 4.
- 2) FOR "CW" ROTATION OF LEESON BEATER MOTOR FOR MODE 1, IS10 CONNECT INTERNAL 15 TO TERMINAL 2 AND INTERNAL 18 TO TERMINAL 4.
- 3) FOR "CW" ROTATION OF 0.0 SMITH BEATER MOTOR FOR MODE 1, IS2 CONNECT INTERNAL R2 TO TERMINAL 4 AND INTERNAL BLACK TO TERMINAL 2.
- 4) FOR "CW" ROTATION OF 0.0 SMITH BEATER MOTOR FOR MODE 1, IS2 CONNECT INTERNAL BLACK TO TERMINAL 4 AND INTERNAL RED TO TERMINAL 2.
- 5) FOR "CW" ROTATION OF GE/ABC BEATER MOTOR FOR MODE 1, IS10 CONNECT INTERNAL YELLOW TO TERMINAL 5 AND INTERNAL BLUE TO TERMINAL 2.

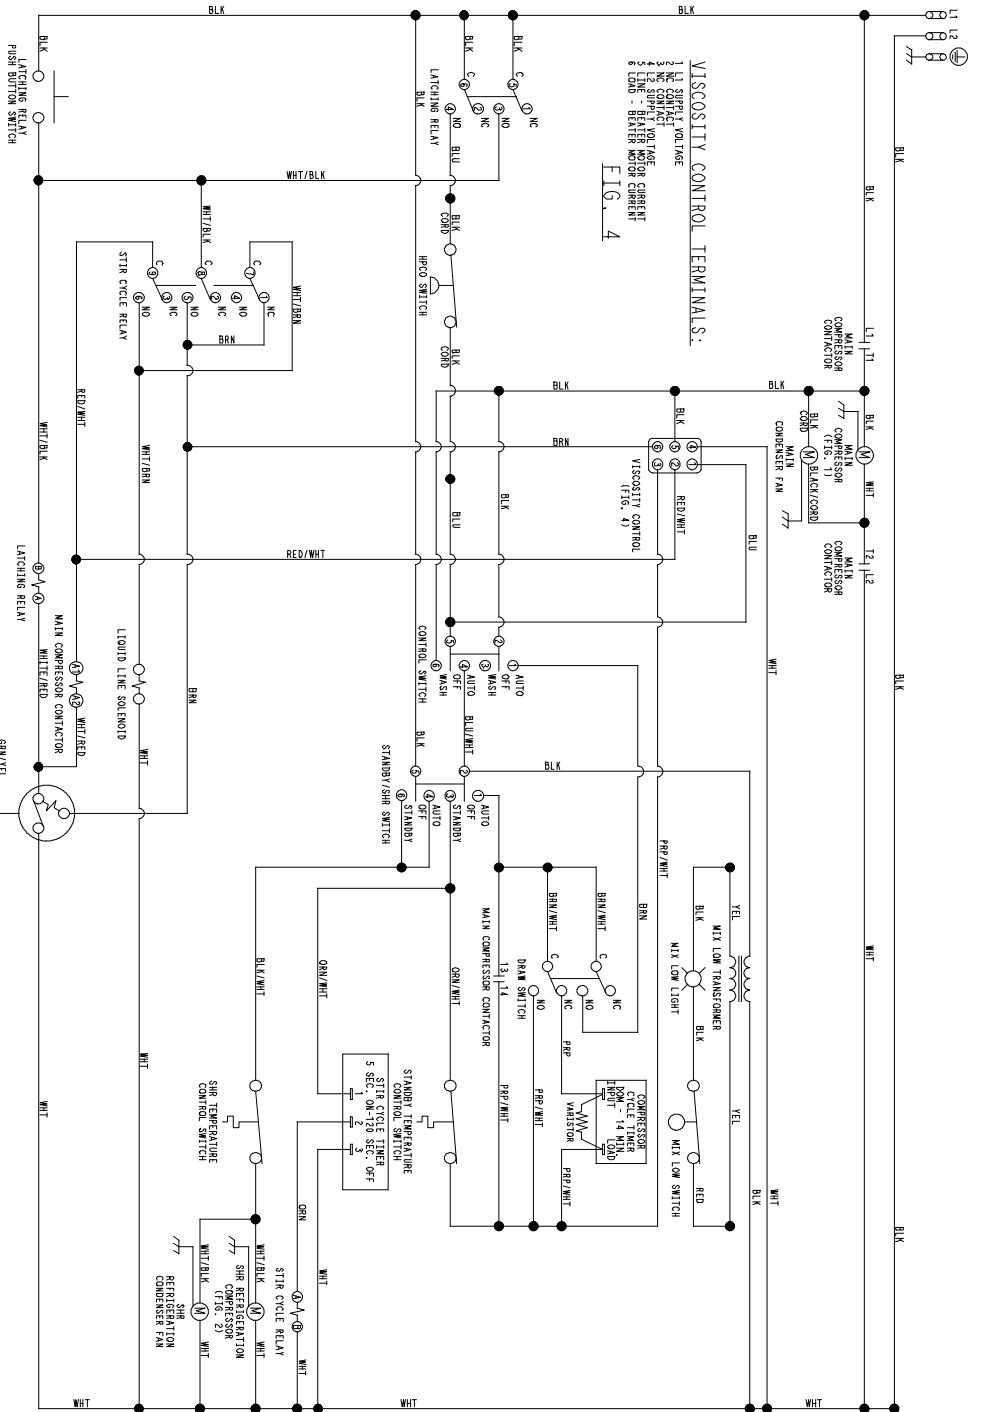

FIG. 1  
TECUMSEH COMPRESSOR WIRING

FIG. 2  
SHR COMPRESSOR WIRING  
(MODEL T150 W/1517)

- NOTES:
- 1) FOR 'CCW' ROTATION OF LESSON BEATER MOTOR FOR MODEL #150 CONNECT INTERNAL 18 TO TERMINAL 2 AND INTERNAL 15 TO TERMINAL 4.
  - 2) FOR 'CW' ROTATION OF LESSON BEATER MOTOR FOR MODEL #150 CONNECT INTERNAL 15 TO TERMINAL 2 AND INTERNAL 18 TO TERMINAL 4.
  - 3) FOR 'CCW' ROTATION OF A.O. SMITH BEATER MOTOR FOR MODEL #152 CONNECT INTERNAL RED TO TERMINAL 4 AND INTERNAL YELLOW TO TERMINAL 2.
  - 4) FOR 'CW' ROTATION OF A.O. SMITH BEATER MOTOR FOR MODEL #152 CONNECT INTERNAL BLUE TO TERMINAL 5 AND INTERNAL RED TO TERMINAL 2.
  - 5) FOR 'CW' ROTATION OF GE/ARC BEATER MOTOR FOR MODEL #150 CONNECT INTERNAL YELLOW TO TERMINAL 5 AND INTERNAL BLUE TO TERMINAL 2.

FIG. 3

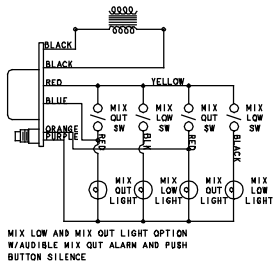

1. ONE (1) FAN ONLY ON MODEL  
168. RUN CAPACITOR APPLIES  
TO MODEL 168 ONLY.
